

License Management by ChronosHub

Fast forward the signing of licenses. Once a paper is accepted in your peer review system, ChronosHub takes over. The author gets a magic link, signs the right license digitally, and everyone moves on. It takes minutes.

Save time for your team

License signing goes from weeks of email chasing to minutes. Your team focuses on publishing, not admin.

Make signing effortless for authors

A single magic link, no login, no confusion. Authors sign and move on. Fewer support tickets for your team.

Shore up your audit trail

The delegation of license signature, change requests, and record-keeping are all handled on the platform. Nothing slips through the cracks.

How it works

Acceptance

A paper accepted in your peer review system. ChronosHub is notified automatically.

Magic link

Author receives an email with a personalized link. No login required.

License signed

Author chooses their publishing option (both closed and open routes supported) and signs the relevant license digitally.

All done

Signed license stored centrally. Author can access it on their dashboard. Your team has full visibility.

Key capabilities

- ✓ **License change management**
Authors can request a different license post-signing. Staff are notified and manage requests in one centralized view.
- ✓ **Delegation of signature**
When authors aren't copyright holders, they nominate a third party. The platform tracks and records who signs in the end.
- ✓ **Retrospective OA conversion**
Let authors convert to open access after initial signing, including articles already published.
- ✓ **Flexible integrations**
ChronosHub connects with the systems you already use, so data flows automatically from acceptance through to your downstream systems.

"ChronosHub is brilliant at helping authors identify their options in a way that makes it as painless, frictionless, and easy as possible."

— **Tony Roche** Chief Officer Publishing and Strategic Relations, Emerald Publishing
