

Manuscript Tracking by ChronosHub

One place for every manuscript in progress. It connects with your existing publishing systems, so next steps and statuses flow into a single view. Authors know where their paper stands. You spend less time chasing updates.

Clarify the journey

Authors can check manuscript status in real-time. No email exchanges needed.

Keep authors moving

Make it easy to complete revisions, proofing, and other publishing tasks.

Reenergize your tech

Upgrade or replace backend systems without disrupting the author experience.

How it works

Unified Interface

Authors only interact with ChronosHub's interface, even though multiple back-end systems are involved.

Guided Workflow

The "swimlanes" guide them through their publishing journey, from submitting to paying fees.

Automated Flow

ChronosHub automates the flow of manuscripts, metadata, author identifiers, and journal configuration information.

ORCID Integration

ChronosHub uses integrated services to validate ORCID iDs and pull in institutional affiliations.

Integrates to your tech stack

Depending on the integration, authors take action directly inside ChronosHub or follow a link directly into an external system. Either way, the manuscript status updates automatically.

- ✓ Peer review
- ✓ Submission
- ✓ Identity verification
- ✓ Metadata services
- ✓ SSO
- ✓ Billing
- ✓ License signing

"ChronosHub delivers a consistent, intuitive author experience while letting us plug and play new tools, experiment more, and work flexibly on the back end."

— Teodoro Pulvirenti, Vice President Global Editorial Strategy, ACS Publications
